

# 5 years of Continuous CNC Programming Partnership

## CASE STUDY

### Industry:

Defense

### Scope of Work:

A leading manufacturer of aircraft for government programs, required a business partner with capabilities to 100% to support their machine NC programming needs for multiple ongoing programs. The need included shop support, NC Programming, material logistics, engineering support, quality liaison, and more.

The challenges included:

- The client's peak-valley business cycle presented challenges with efficient staffing utilization
- A traditional staffing solution was not satisfactory due to having to train/retrain individuals on the client's engineering standards
- There were no guarantees that the same contracted NC Programmers would be available, project to project

### Activities:

The client wanted to build a collaborative relationship with a highly technical NC Programming group that could 100% support their programs from start to finish.

Global Partner Solutions was able to provide the client with the needed support to their programs from start to finish by providing them with:

- a dedicated Project Manager to oversee the entirety of the program.
- many years of experience in NC Programming support and delivering projects which were perfectly suited to fulfill the client's needs
- a highly-skilled/experienced crew that goes over and above the client's needs

### Results:

Global Partner Solutions has become the client's premier resource for out-sourced NC Programming and Engineering. Since then, the client is enjoying the benefits of a stable core of internal NC Programmers complemented by a proven, variable-cost resource of talent provided by Global Partner Solutions.

 **1,000+**  
Parts programmed

 **5+**  
Years of continuous partnership

 **60+**  
NC Programmers provided overtime
